DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12, 18, 26-33 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The prior art, USPG Pub. 2002/0087602 to Masuda, teaches a means of creating one integrated document from a plurality of different electronic source documents. The reference discloses a collection made up of pages which could be moved or divided into other collection windows. Further, the reference to Masuda teaches chapters made up of pages and an editor which includes options related to moving pages from one chapter to another and rotating pages within chapters. The system updates any changes to the source documents and thus integrates changes into one specific document. The reference to Masuda fails to teach or suggest a means for determining whether a type of data input is image data or another type of data and also fails to provide an editor that creates a new chapter at the designated position of the document if the data is anything but image data. Furthermore, the method edits the document so as to insert a page formed with the designated data into an existing chapter at the designated position of the document without creating a new chapter if the data is found to be image data. The reference to Masuda as well as the prior art fails to provide the combination of limitations found within the independent claim that would render the invention obvious or fail to meet the novelty requirements. In reference to independent claims 1, 7, and 18, the claimed features of inserting data into a designated position of the layer structured document, determining whether a type of designated data is image data or data other than image

data, and editing the document so as to create a new chapter at the designated position of the document by inserting a page formed with the designated data into the new chapter if the data is not image data or editing the document so as to insert a page formed with the designated data into an existing chapter at the designated position of the document within creating a new chapter if the document is image data, is not shown in the prior art of record. Further, it would not have been obvious to one of ordinary skill in the art to have combined the prior art of record to come up with applicant's claimed invention.
